Career objective

Results-driven Full-Stack Web Developer with hands-on experience building scalable and secure web applications using modern technologies, including the MERN stack, Next.js, and TypeScript. Strong foundation in designing responsive, user-focused interfaces and developing robust RESTful APIs. Passionate about writing clean, maintainable code and solving real-world problems through efficient system design. Seeking an entry-level opportunity to contribute to a collaborative development team while continuously growing as a software engineer.

Technical Skills

Frontend: React.js (v19), Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS (v4), HTML5, CSS3
Backend: Node.js, Express.js, RESTful APIs, JWT (JSON Web Tokens)
Database & ORM: MongoDB, PostgreSQL, Prisma, Firebase
Platforms & Tools: Git, GitHub, Netlify, Vercel, Postman, Figma, WordPress
Key Concepts: Authentication & Authorization, CRUD Operations, Supply Chain Logic, Responsive Design, API Integration

Projects

Acadex | Note sharing Platform live link | Frontend Code | Backend Code

Classroom-first study platform built for students to join classrooms, organize subjects and folders, upload notes, save favorites, and track leaderboard activity through a role-aware academic workflow.

Built a modern frontend using Next.js 16, React 19, and TypeScript with a structured App Router architecture.
Implemented role-aware dashboard flows for students, class representatives (CRs), admins, and super admins.
Create a classroom, subject, folder, and note-based organization to support a clean academic content hierarchy.
Integrated features such as note uploads, favorites, comments, approval-aware workflows, and leaderboard experiences.
Technologies: Next.js, React, TypeScript, Tailwind CSS, TanStack Query, TanStack React Form, Axios, Framer Motion, Zod, Radix UI

Store-Xen (POS & Inventory Management System) live link | Frontend Code | Backend Code

Comprehensive POS and inventory management system designed to streamline retail operations with procurement, stock management, and supplier payment workflows.

Engineered a multi-stage supply chain workflow where Purchase Orders (PO) convert into Goods Received Notes (GRN), automatically updating inventory.
Designed a scalable inventory structure supporting warehouse tracking, batch numbers, and expiry dates for accurate stock control.
Implemented supplier payment tracking for partial and full payments with clear financial workflow visibility.
Used TanStack Table for efficient sorting, filtering, and pagination of large operational datasets.
Technologies: React.js, Node.js, Express.js, MongoDB, TanStack Table, Tailwind CSS

Easy Home (Real Estate Platform) live link | Frontend Code | Backend Code

Full-featured real estate platform with separate role-based dashboards for users, agents, and admins.

Implemented secure authentication using Firebase and JWT to support protected role-based access.
Built wishlist and property offer workflows allowing users to explore, negotiate, and purchase properties.
Created admin tools for property verification, fraud detection, and sales monitoring.
Designed responsive interfaces for browsing listings, reviewing properties, and managing transactions.
Technologies: React.js, Node.js, Express.js, MongoDB, Firebase Auth, JWT

Education

Bachelor of Science in Computer Science and Engineering
Uttara University
2025 – Expected Graduation: 2029

Language

Bengali: Native
English: Professional Working Proficiency
